CMIE States of India

(<http://statesofindia.cmie.com/>)

Description

States of India is a large statistical compendium of the 37 states, union territories and 724 districts of India. Statistics on states are released by various state & central agencies. CMIE excels in compiling all this information into one cohesive and seamless offering. States of India focuses on providing up-to-date data and up-to-date news on the individual regions. There are over 85 million time-series in this service. All information is available in a clean and easily usable form so that when you need it, you find it without much ado. The statistics covered here include a wide spectrum of economic and socio-economic indicators. This is a veritable Goldmine for an analyst. It is a convenient source to look-up for quick facts as much as to conduct inter-state comparisons. If you need access to detailed time-series of Census statistics to understand the geographical distribution of the demographic dividend or the performance of the political parties in the central and state elections in the various states of India or get a picture of the power deficit situation in the various states of India, and a host of similar other facts, the States of India is ideally suited for you. A somewhat comprehensive description of the coverage of statistics would include the following - State Domestic Product, Inflation, Banking, Public Finance, Agriculture, Mining, Annual Survey of Industries, Economic Census, Investments, Electricity, Coal, Petroleum & Gas, Railways, Roadways, Ports, Civil Aviation, Telecommunications, Demographics, Household Amenities, Education, Employment, Crime and Elections. Time-series for all these indicators are presented in simple tabulations. Time-series data is available for most indicators from 1990-91 onwards. The tabulations are designed to enable easy time-series analysis. Separate presentations enable inter-state comparisons.

Statistics on Demographic Patterns, Economic Growth, Investments, Education, Bank Credit and Agricultural Performance at the district-level will be a part of the service.

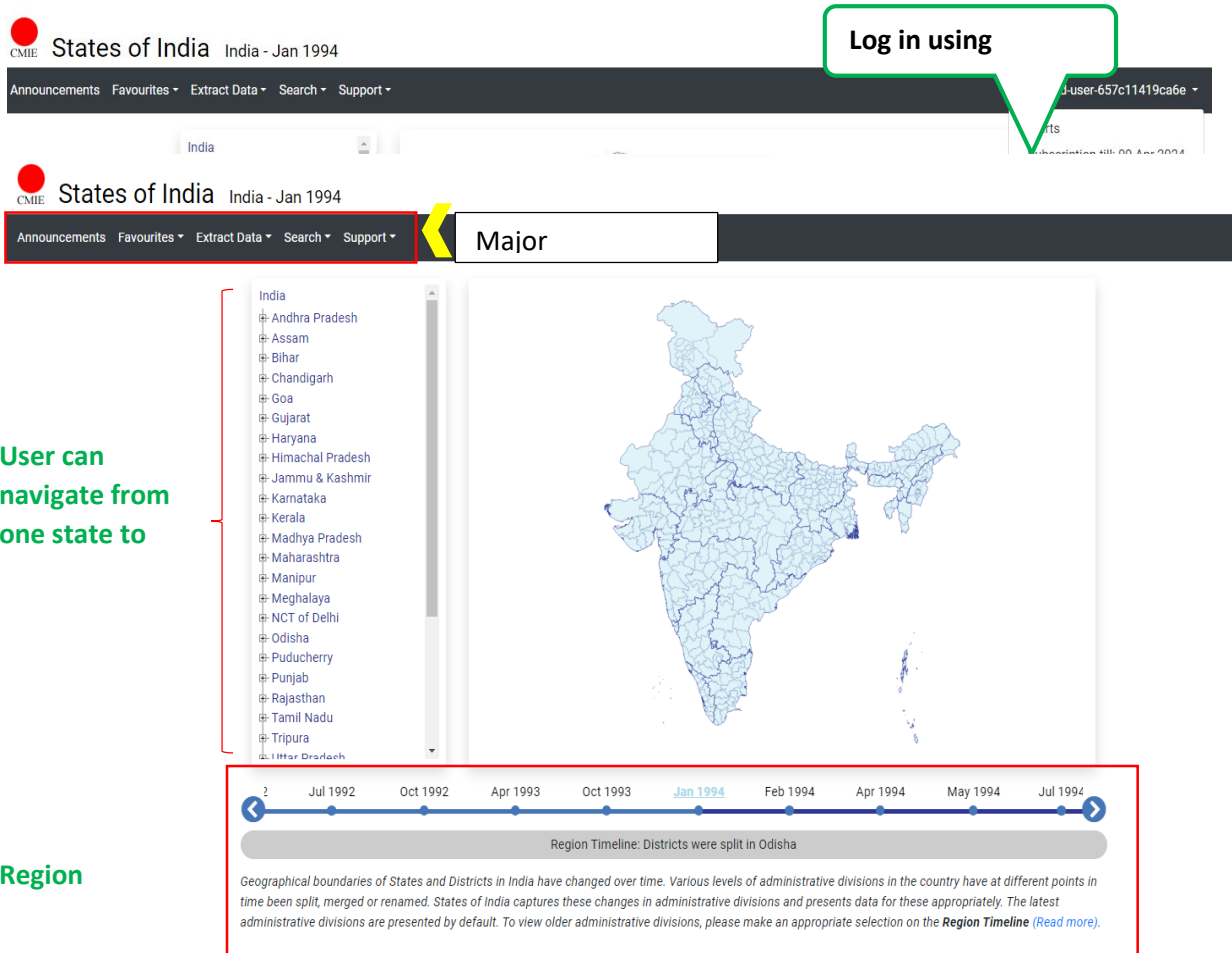

Major Subject Areas Covered:

India Centric Content; Socio-Economic Indicators and statistics

Access Method: IP Authentication + One-time Registration using IIMK Email id

How to use:

It provides comprehensive compilation of state level statistics. Statistics is sourced from official documents of state government.

The screenshot displays the 'States of India' website interface. At the top, there is a navigation bar with 'Announcements', 'Favourites', 'Extract Data', 'Search', and 'Support'. A 'Log in using' button is highlighted with a green callout box. Below the navigation bar, a dropdown menu is open, showing a list of Indian states and union territories. A red box highlights the 'Major' section of the dropdown menu. To the right of the dropdown menu is a map of India. Below the map, a 'Region Timeline' is shown, with a red box highlighting it. The timeline includes dates from July 1992 to July 1994, with 'Jan 1994' selected. A note below the timeline states: 'Region Timeline: Districts were split in Odisha'. A green callout box on the left side of the screenshot says 'User can navigate from one state to'. Another green callout box on the left side of the screenshot says 'Region'.

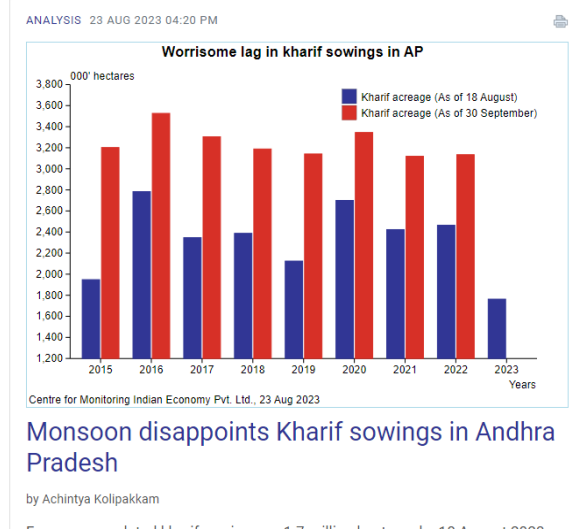

All states, districts, and regions' socioeconomic indicators are included in the database. Geographic timeline filtering is one of the way to refine the data.

Choose any state.

How can I extract data using Soldx?

- Select the regions of interest keeping in mind their [Geographical Timeline](#).
- Select the [Indicator set\(s\)](#) for which the data needs to be extracted.
- Select output preferences such as time-period and format of date.
- Save specifications for possible future use and execute the data extraction.
- To download sample dump [Click here](#).

Access requested dump under [Specifications & Requests](#). Saved specifications can be used to re-extract data in the future.

What is the limit on selection of indicators to create a data set?

- One can create a dataset with 'Region' x 'Indicator' combinations of up to 50,000 in Soldx.
- A request for data extraction can translate into 5 or more hits. The number of hits deducted are linked to the 'Region' x 'Indicator' combination selected.
- The number of Hits that a specification translates into is shown just next to the execution command, which is the 'Save Specifications and Extract Data' button.

Range (Region x Indicator)		
From	To	Hits
1	5,000	5
5,001	10,000	10
10,001	15,000	15
15,001	20,000	20
20,001	25,000	25
25,001	30,000	30
30,001	35,000	35
35,001	40,000	40
40,001	45,000	45
45,001	50,000	50
